EXAMINER

VAN HANDEL, MICHAEL P

ART UNIT PAPER NUMBER

2616

DATE MAILED: 06/07/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 09/884,102	Applicant(s) MATSUMOTO ET AL.	
	Examiner Michael Van Handel	Art Unit 2616	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-10 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-10 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. ____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Specification

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1, 5, 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Alexander et al. (US 6,177,931).

Referring to claim 1, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. A conventional television receiver(digital broadcasting receiver) can generate a display 10(electronic program guide display means)(col. 3, l. 4-5)(Fig. 1). In one of Alexander's embodiments, a

Art Unit: 2616

viewer is asked to tune to a particular channel at a particular time if the viewer is interested in accessing and downloading particular types of information (col. 8, l. 32-35)(displaying program information on a screen on the basis of service information included in digital broadcasting). The data is presented to the display by an on-screen display module (on-screen display circuit)(col. 5, l. 28-37).

Alexander et al. also discloses a PIP window 12 that displays a real time television program together with the EPG (received video display means for reducing received video and displaying the video, together with program information)(col. 3, l. 56-58)(Fig. 1).

Alexander et al. also discloses data download functionality for the EPG schedule, and/or supplemental information relevant to the program listings. Data for the EPG schedule, and/or supplemental information relevant to the program listings can be downloaded from various sources (information acquisition means for acquiring information related to a selected channel)(col. 8, l. 18-35).

Alexander et al. also discloses a translucent overlay of the PIP window 12, which can display the title, channel, and status of window 12 over the television program so the viewer can still see the entire image (message display means for creating a message corresponding to the acquired information and displaying the message in an area where the received video is reduced and displayed)(col. 3, l. 58-62).

Referring to claim 5, Alexander et al. discloses a procedure wherein a parent identifies all viewers of the television, and assigns individual viewer identifiers. The parent selects the channels and programs that can be visible in the Grid Guide for a particular viewer and selects channels and/or programs that are to be blocked from

Art Unit: 2616

viewing. Child viewers will view a simplified Grid Guide and will be blocked from viewing the programs so marked by the parent. Viewers are identified by viewer ID and password or by the individual viewer's remote control (information acquisition means acquires information indicating whether or not the selected channel corresponds to the viewing age limit)(col. 17, l. 13-36).

Referring to claim 6, Alexander et al. discloses a translucent overlay of the PIP window 12, which can display the title, channel, and status of window 12 over the television program so the viewer can still see the entire image (message display means displays a message in a semitransparent state in an area where received video is reduced and displayed)(col. 3, l. 58-62).

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 2, 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US 6,177,931) in view of Breslauer et al. (US 6,637,027).

Referring to claim 2, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. The system can utilize a conventional television receiver (digital broadcasting receiver) to generate display 10 (col. 3, l. 4-5)(Fig. 1). Alexander et al. does not disclose that the information acquisition means acquires contract information related to a selected channel. Breslauer et al. discloses that a conditional access provider may provide a HTML format document that indicates terms

Art Unit: 2616

of a contract that need to be accepted before access to a pay-per-view channel will be granted (col. 10, l. 26-28, 38-50). It would have been obvious to modify Alexander et al. to include a HTML format document indicating terms of a contract that need to be accepted before access to a pay-per-view channel will be granted such as that taught by Breslauer et al. in order to allow the viewer the convenience of perusing and accepting a contract from their home.

Referring to claim 7, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. The system can utilize a conventional television receiver (digital broadcasting receiver) to generate display 10 (col. 3, l. 4-5)(Fig. 1). The system also includes a PIP window 12 with a translucent overlay. The overlay can display the title, channel, and status of window 12 over the television program (col. 3, l. 57-62).

6. Claims 3, 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US 6,177,93) in view of Dunn et al. (US 5,721,829).

Referring to claim 3, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. The system can utilize a conventional television receiver (digital broadcasting receiver) to generate display 10 (col. 3, l. 4-5)(Fig. 1). Alexander et al. does not disclose that the information acquisition means acquires preview information related to the selected channel. Dunn et al. discloses a preview browse UI of a VOD application 74 (Fig. 3). The preview browse UI facilitates the display of preview video trailers on the TV, which correspond to these programs. The UI further enables the viewer to “surf” through the various trailers at his/her own pace, and rent a program for immediate viewing (information acquisition means acquires

Art Unit: 2616

preview information related to the selected channel)(col. 5, l. 1-15). It would have been obvious to modify Alexander et al. to include a preview browse UI such as that taught by Dunn et al. in order to allow the viewer to preview channels before purchasing them.

Referring to claim 8, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. The system can utilize a conventional television receiver (digital broadcasting receiver) to generate display 10 (col. 3, l. 4-5)(Fig. 1). The system also includes a PIP window 12 with a translucent overlay. The overlay can display the title, channel, and status of window 12 over the television program (col. 3, l. 57-62).

7. Claims 4,9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Alexander et al. (US 6,177,931) in view of Kohno et al. (US 6,462,784).

Referring to claim 4, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. The system can utilize a conventional television receiver (digital broadcasting receiver) to generate display 10 (col. 3, l. 4-5)(Fig. 1). Alexander et al. does not disclose that the information acquisition means acquires information indicating whether or not the selected channel is a radio program. Kohno et al. discloses an (on-air program guide) PP with a channel selecting section 83 that displays buttons for determining a channel selected at a program title displaying section 82 (col. 8, l. 20-22)(Fig. 6). Television channel determining button 83A has buttons capable of selecting a radio channel (col. 8, l. 25). When the radio channel button 83R is selected by the cursor K, the programs having no image but having audio signals are displayed at the program title displaying section 82 in the order of the channels (col. 9, l. 66-67 and col. 10, l. 1-2)(Fig. 9). It would have been obvious to modify Alexander

Art Unit: 2616

et al. to include a radio channel button such as that taught by Kohno et al. in order to present the viewer with information indicating whether a given channel is a television or radio program.

Referring to claim 9, Alexander et al. discloses a system and method for displaying an improved EPG on a display screen. The system can utilize a conventional television receiver (digital broadcasting receiver) to generate display 10 (col. 3, l. 4-5)(Fig. 1). The system also includes a PIP window 12 with a translucent overlay. The overlay can display the title, channel, and status of window 12 over the television program (col. 3, l. 57-62).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Gordon et al. (US 2004/0133910) discloses a program guide differing graphic layer opacities and with a video barker that can be used to display movie trailers.

Schlarb et al. (US 6,664,984) discloses a method and system for designating and identifying individual programming in an electronic program guide that is available in a subscriber's television system as a pay-per-view event. Schlarb et al. also discloses a picture-in-picture window that displays a still picture, a video clip, live video, information associated with the selected program, or information associated with the program guide.

Lawler et al. (US 5,907,323) discloses an electronic program guide with a program summary panel that includes a text description and display imagery of a user-selected program.
